### Northwest Fire Weather Summary

Rain will move into much of the region west of the Cascades on Friday with some of the moisture crossing the Cascades Friday night. This will elevate humidity on both sides of the Cascades. More rain will move into the west side over the weekend with wet thundershowers becoming possible over central Oregon by Sunday. General winds on Friday and Saturday are expected to diminish.

### Northwest Fire Potential Summary

Significant fire potential is anticipated to be low on Friday and Saturday due to reduced fire danger and moderated weather. Some lightning will start again by Sunday which will ramp up fire risk in central and eastern Oregon and spread to sections of central and eastern Washington by Monday and Tuesday. Thunderstorms will have rainfall but fire ignitions are likely in places where drought and dry fuels are predominant.
